NOTE:

CFP-100G-ER4 optical modules are used in the following scenarios:

• When the transmission distance is less than 10 km, the optical power on the receive end is higher than 1 dBm. In this case, use a 10 dB optical attenuator to reduce the receive optical power.

- When the transmission distance is longer than or equal to 10 km and less than 25 km, the optical power on the receive end is higher than -4 dBm and lower than or equal to 1 dBm. In this case, use a 5 dB optical attenuator to reduce the receive optical power.
- When the transmission distance is in the range of 25 km and 40 km, the optical power on the receive end is lower than or equal to -4 dBm. In this case, no optical attenuator is required.
